-!- FUNCTION: This protein is one of 10 proteins (RAD1, 2,3,4,7,10,14, 16,22 and MMS19) involved in excision repair of DNA damaged with UV light, bulky adducts, or cross-linking agents.
-!- MISCELLANBOUG: Muchants with mutations in the RAD7, RAD14, RAD16, and RAD23 genes show partial incision defectiveness.

            induces glucose repression. Is not an essential protein. Involved in substrate recognition in ubiquitin-dependent degradation.
                                                                      PATHWAY: Necessary for the glucose repression pathway. SUBUNIT: Part of a SCF B3 ubiquitin ligase complex containing SCBID. CS53, HATI and GRAI. SUBCELULAR LOCATION: Associated with the particulate fraction. Probably forms a complex by protein-protein interactions via its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        50 ----SQVCRRWYELDSLTRKHVTIAL------CYTTTPARLRRRFP-----

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).

-1- SUBUNIT: Part of a SCF (SKPI-cullin-F-box) protein ligase complex (By similarity).

-1- SUBCELLULAR LOCATION: Nuclear and cytoplasmic.

-1- TISSUE SPECIFICITY: Expressed in heart, kidney, liver, lung, pancrea, and placenta, but not in skeletal muscle.

-1- SIMILARITY: Contains 1 F-box domain.

-1- SIMILARITY: Contains 8 leucine-rich (IRR) repeats.
